

WHITEPAPER

WTHP TOKEN

WETHEHANDPLAYERS

**A studio in which gaming and crypto geeks collaborate
to merge elements of gaming entertainment with blockchain technology.**

We specialize in Free-to-Play and Play-to-Earn game titles, each built on unique concepts and mechanics designed to entertain millions of players worldwide. By integrating the WTHP token ecosystem and in-game NFTs, we aim to offer opportunities for acquiring exchange tools with growth potential and value creation.

ABSTRACT

Our studio is a dynamic hub where passionate gamers, game developers, and blockchain innovators come together, bridging the worlds of entertainment and technology

We're not focused on creating average Free-to-Play or Play-to-Earn game titles. Instead, we are dedicated to developing high-quality games that captivate, entertain, create a healthy sense of excitement, and, most importantly, satisfy even the most discerning players. By harnessing the transformative power of the WTHP token ecosystem and immersive in-game NFTs, our goal is to provide a solid framework for acquiring and exchanging value, fostering both growth and asset appreciation.

In addition, our mission is to build a robust DAO (Decentralized Autonomous Organization) ecosystem centered on gaming experiences integrated into our platform. Ultimately, we aim to establish a sustainable gaming environment that empowers independent developers to fully unleash their creative potential. This effort will culminate in the creation of a decentralized mobile gaming studio, poised to redefine the future of interactive entertainment.

DESIGN

At the core of our project is a game client, similar to established platforms like Google Play, the App Store, Steam, or the Epic Store. Through this client, users will access immersive gaming experiences, an integrated marketplace for in-game assets, competitive opportunities, and a decentralized autonomous organization (DAO) framework for governance.

Central to our ecosystem is the seamless integration with the Avalanche blockchain and our native token. We chose Avalanche for its high-speed performance and ability to create subnets tailored to specific use cases. Its compatibility with the Ethereum Virtual Machine (EVM) allows us to leverage existing expertise, enabling the development and deployment of robust, standardized smart contracts that ensure reliability and efficiency.

At the heart of our ecosystem is the WeTheHandPlayers Token (\$WTHP), which serves as the foundation for building a decentralized and sustainable gaming environment.

DAO GOVERNANCE

We are committed to establishing a robust DAO framework at the heart of our project, promoting decentralization and community-driven governance. The DAO will serve two key functions, with its primary focus on managing a grants program. This program will allocate resources from our Studio Growth Fund to independent studios and game developers, ensuring the continuous expansion of our gaming portfolio.

Through a transparent and democratic process, DAO participants will exercise their voting rights to determine fund allocation, empowering the community to shape the direction of our ecosystem. The grants program operates reciprocally, allowing both external studios and developers to submit project proposals while also enabling the DAO to invite specific creators to develop game initiatives.

In addition to the grants program, we will implement staking mechanisms with associated rewards. Exclusive voting rights within the grants program will be granted to staking participants, who will be rewarded from our staking rewards vault. These incentives encourage active participation in governance and align stakeholders' interests with the success of supported projects, as stakers will receive enhanced rewards based on the performance of the grants they have voted for.

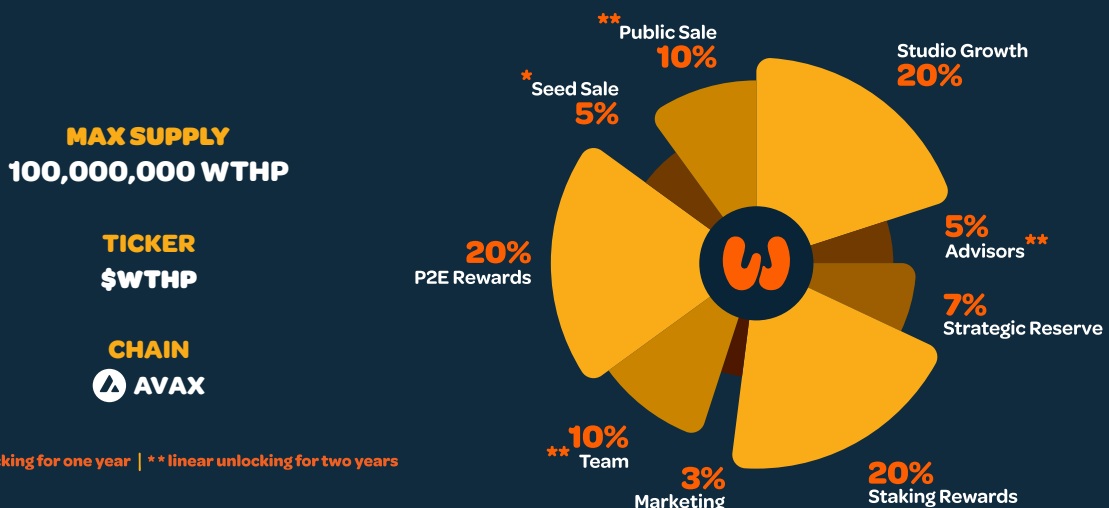

WETHEHANDPLAYERS TOKEN (\$WTHP)

\$WTHP serves as a multifaceted catalyst in building a decentralized gaming ecosystem, fulfilling three key roles essential to fostering community engagement and sustainable growth. First, \$WTHP plays a central role in facilitating DAO governance, as previously discussed.

The second role focuses on player engagement, incentivizing active participation and excellence within our gaming environment. This strategy has two main components. Players are rewarded for their performance, creating a culture of dedication and involvement within the DAO ecosystem. Notably, WTHP tokens are awarded as recognition for player achievements. Additionally, player engagement is further encouraged through specific challenges, where participants receive immediate token rewards, amplifying the competitive spirit and promoting ongoing involvement.

Finally, \$WTHP is pivotal in value accrual through a token-burning smart contract mechanism. Every transaction, whether purchasing in-game assets or entering tournaments, requires a fee paid in \$WTHP tokens. These fees are funneled into a token-burning smart contract, gradually reducing the total token supply. This deflationary mechanism directly ties the token's value to user engagement, game activity, and enjoyment, creating a self-sustaining ecosystem where the token's worth is intricately linked to the platform's growth and appeal.

TOKENOMICS

ROADMAP

Our roadmap outlines our journey toward becoming a fully decentralized organization, driving advancements in blockchain and gaming.

SUMMARY

Our primary objective is to establish a decentralized gaming studio that develops engaging titles for both casual players and crypto enthusiasts. We are committed to creating the most compelling and enjoyable experiences within this niche. To continuously attract new players, we recognize the importance of evolving and leveraging the creativity of independent developers, whether studios or individuals. At the core of our ecosystem is our native token, driving sustainable growth by incentivizing creators and attracting fresh players. We believe that the 'Play-to-Earn' model surpasses traditional 'Free-to-Play' systems, and the current market dynamics offer a unique opportunity for us to secure our place in this gaming industry.

Whether you're a seasoned gamer looking to monetize your skills or a newcomer eager to explore blockchain gaming, the world of Play-to-Earn is filled with opportunities and adventures. **Embrace the revolution and start earning - join the future of gaming today!**

**WHETHER YOU LIE, SIT, OR STAND
TAKE IT IN YOUR HAND!**
