

# WTHP TOKEN

## Whitepaper

Version 2.1.1.

### WeTheHandPlayers

A studio in which gaming and crypto geeks collaborate to merge elements of gaming entertainment with blockchain technology.

We specialize in Free-to-Play and Play-to-Earn game titles, each based on the original idea and mechanics with the aim to entertain millions of players globally. Through the integration of the WTHP token ecosystem and in-game NFTs, our aim is to provide an opportunity for acquiring an exchange tool with the potential for growth and value creation.

### Abstract

Our studio serves as a dynamic hub where passionate gamers, game developers, and blockchain innovators are bridging the fields of entertainment and technology together.

We are not focused on crafting some average Free-to-Play and Play-to-Earn game titles. Instead, we are committed to developing high-quality games that will captivate, entertain, bring healthy playful nervousness, and, foremost, satisfy even the most demanding players! By implementing and leveraging the transformative power of the WTHP token ecosystem and immersive in-game Non-Fungible Tokens (NFTs), our objective is to furnish everybody with a robust framework for acquiring and exchanging value, fostering both growth and tangible asset appreciation. Also, our mission is to cultivate a robust DAO (Decentralized Autonomous Organization) ecosystem centered around gaming experiences integrated into our platform. Our overarching objective is to forge a sustainable gaming environment, empowering independent game developers to unleash their creative potential. Ultimately, this endeavor will culminate in the establishment of a decentralized mobile gaming studio, poised to redefine the landscape of interactive entertainment.

### Design

In the foundational architecture of our project lies the game client, akin to established platforms such as Google Play, App Store, Steam or Epic Store. Within this client interface, users will encounter gaming experiences, an integrated marketplace for in-game assets, competitive avenues, and a decentralized autonomous organization (DAO) framework for governance. Central to our gaming ecosystem is the seamless integration with the Avalanche blockchain and our native token. The selection of Avalanche stems primarily from its high-speed performance and the capacity to establish subnets tailored to specific use cases. Leveraging Avalanche's Ethereum Virtual Machine (EVM) compatibility affords us the advantage of employing pre-existing expertise to develop and deploy robust and standardized smart contracts, ensuring reliability and efficiency. At the nucleus of our ecosystem lies the WeTheHandPlayers Token (WTHP), serving as the cornerstone for establishing a decentralized and sustainable gaming environment.

## **DAO Governance**

We are dedicated to establishing a robust DAO framework at the core of our project, aimed at fostering decentralization and community-driven governance. The DAO will be endowed with dual functionalities, with its primary focus on facilitating a grants program. At the forefront of this program is the allocation of resources from our Studio Growth fund to independent studios and game developers, ensuring the continual enrichment of our gaming portfolio.

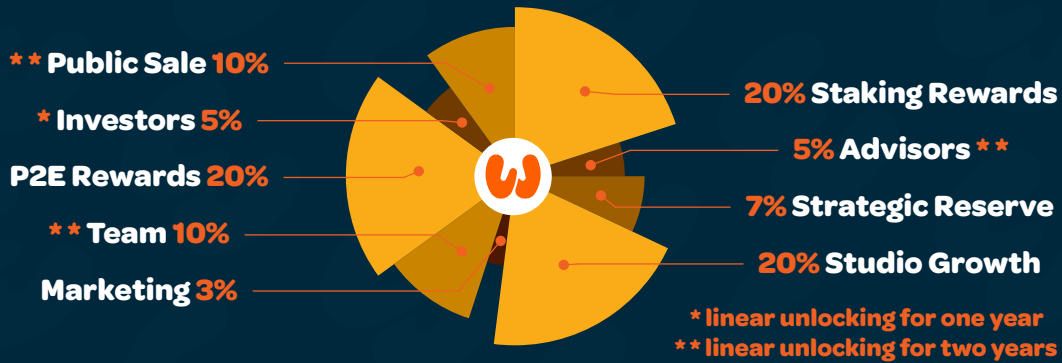

Through a transparent and democratic process, DAO participants will exercise their voting rights to determine the allocation of funds, thereby empowering the community to shape the trajectory of our ecosystem. The grants program operates on a reciprocal basis, enabling both external studios and developers to propose projects for consideration and empowering the DAO to extend offers to specific creators for game development initiatives. Complementing the grants program is the implementation of staking mechanisms and associated rewards. Exclusive access to voting privileges within the grants program is granted to staking participants, who are duly rewarded from our staking rewards vault. These incentives not only encourage active participation in the governance process but also align stakeholders' interests with the future success of projects, as stakers stand to receive enhanced rewards contingent on the performance of grants they have supported through their votes.

## **WeTheHandPlayers Token (WTHP)**

WTHP serves as a multifaceted catalyst in the establishment of a decentralized gaming ecosystem, underpinned by three pivotal roles, each crucial in its contribution to fostering community engagement and sustainable growth. First and foremost, WTHP assumes a pivotal role in facilitating DAO governance, as previously discussed. The second role is centered around player engagement, where they are incentivized to actively participate and excel within our gaming environment. This engagement strategy comprises two primary components. Initially, players are rewarded for their performance, fostering a culture of dedication and involvement within the DAO ecosystem. Notably, the players are bestowed with WTHP tokens as recognition of their achievements. Furthermore, player engagement is bolstered through specific disciplines, where participants receive immediate token rewards, amplifying the competitive spirit and encouraging sustained involvement. Lastly, WTHP assumes a crucial role in value accrual, facilitated through a token-burning smart contract mechanism. Every transaction, whether it involves the purchase of in-game assets from the shop or entry into tournaments, mandates a fee payable in WTHP tokens. These accrued fees are subsequently directed towards a token-burning smart contract, effectively reducing the total token supply. This deflationary mechanism inherently links the token's value to user engagement, game utilization, and enjoyment, thereby fostering a self-sustaining ecosystem wherein the token's worth is intricately intertwined with the platform's vitality and appeal.

## Tokenomics

**MAX SUPPLY: 100 000 000 WTHP**

## Roadmap

Our roadmap outlines our progression towards becoming a fully decentralized organization that spearheads advancements within the blockchain and gaming sector. With our first game already developed, our current focus is on integrating blockchain features. By Q2 of 2024, we plan to initiate a pilot use case with our inaugural game, coinciding with the introduction of our native token. This phase will include implementing an active rewards system, rewarding players with tokens. Moving into Q3, we'll concentrate on developing a user-friendly client for our ecosystem. To fulfill our goal of decentralization, we aim to streamline our infrastructure for independent creators. Testing will precede the introduction of shop functionalities based on the NFT standard. Proceeds from shop sales and tournament entries will be directed to our token-burning smart contract. In Q4, our focus will shift towards establishing our DAO. This phase marks the beginning of a community-driven approach to enriching our gaming offerings. Throughout 2024 and 2025, our focus will be on establishing a fully functional decentralized autonomous organization (DAO). We aim to build a strong and continuously growing studio that reflects the expansion of our player community.

## Summary

Our primary objective revolves around establishing a decentralized gaming studio specializing in developing engaging titles suitable for both casual players and crypto enthusiasts alike. We are dedicated to crafting the most compelling and enjoyable experiences within this niche. Recognizing the need for constant evolution to engage new players, we aim to harness the creativity of independent developers, both studios and individuals. Central to our ecosystem is our native token, which catalyzes sustainable growth. By incentivizing creators and attracting fresh players, we uphold the belief that a 'Play-to-Earn' model surpasses traditional 'Free-to-Play' systems. The current market dynamics provide us with an opportunity to secure our position in this specific gaming industry.

Whether you're a seasoned gamer looking to monetize your skills or a newcomer eager to explore the possibilities of blockchain gaming, the world of Play-to-Earn awaits with opportunities and adventures. Embrace the revolution, and start earning - join the future of gaming, today!

**Whether you lie, sit, or stand - take it in your hand!**
